Audio Welcome – Unit 2

Welcome back! Hopefully Unit 1 provided a good overview of NIRS and how it can help you obtain diet quality results for your livestock, which will ultimately lead to a healthier herd.

Let’s get started with Unit 2!

Obviously, in order to obtain diet quality results, you must know how to properly collect samples.

In this unit, we will review the supplies that you need to collect a sample and transport it to the lab.

It is also very important that you label the sample properly, and provide all of the information requested on the sample form. This will ensure that the lab where the sample is processed can properly track the sample, and determine what type of equation should be used to predict results.

Finally, a live video of the collection process will be shown to give you a hands on look at how to collect a sample properly, including making sure that you collect a clean, pristine sample, that is free of dirt and external material.
در اخر یک ویدیو در باره جمع اوری نمونه برای تان نشان می دهیم که در ان طریقه جمع اوری نمونه پاک و عاری از مواد خارجی تشريح شده.

To get started click the Next button at the bottom of the course content page or navigate to the Supplies section using the menu on the left.

که به کار شروع کنیم، به تکمیه دیگر در اخر صفحه فهرست کورس فشار دهید و یا در دست چپ در مثال به حصة مواد به روش.
