Welcome to Unit 4. This learning module is the second of three units intended to teach you how to properly process samples in the lab.

Let’s get started!

In lesson 4, you will

• Identify supplies needed to process samples in the lab

• Learn how to properly log samples when they are received

• Learn how to dry fresh samples

• Grind dried samples

• Dry the samples once they have been milled properly

• Collect spectra using SpectraSuite

• and store processed samples properly in the lab
This is a very important lesson, because it will impact the overall reliability of the diet quality results that you obtain. After completing this lesson, you will learn how to predict diet quality results in lesson 5.
